

Laser Therapy Treats Otitis/Ear Infection

Most people can sympathize with an ear ache, understanding the pain involved and the frustration with healing this chronic condition.

Patient: "Petey," 2 yr. Jack Russell Terrier

Problem: Severe Pain and swelling of right ear, due to infection.

The ear canal is a perfect environment for organisms to grow and is also a difficult area to reach. In many cases the need for sedation is necessary to flush and clean the canal for the medication to reach the target area to reduce swelling and pain.

With the use of Companion Laser Therapy, the need for sedation is completely eliminated.

Following an initial treatment, swelling and pain is reduced to allow the medication to reach the effected area.

Pets will appreciate the instant relief and the owner will appreciate the fact that their pet is more comfortable, and that they are able to begin topical treatments at home in an effective manner and resolve this ongoing problem.

- Gingivitis
- Otitis
- And more . . .

The Science Behind Laser Therapy

Your veterinarian is now offering the latest technology in health care for your pet. This FDA cleared, deep-penetrating light allows relief of pain through the release of endorphins and stimulates the injured cells to heal at a faster rate.

When choosing a treatment option for your companion there is now an alternative to pharmaceuticals. The Companion Therapy Laser®, by LiteCure provides immediate results without any dangerous side effects.
