

Anesthesia Services for Cape Surgery Center, LLC

- Welcome to Cape Surgery Center, LLC. We plan for each patient to have a comfortable and safe experience when they have cataract or other eye surgery at our center.
- There will be a Certified Registered Nurse Anesthetist (CRNA) attending to you continuously throughout your surgery. They will be there to administer IV sedation as needed that will make you more relaxed and comfortable. The CRNA will monitor your blood pressure, EKG, heart rate, breathing and oxygenation during your procedure. They will be there to help maintain your health and well being.
- The CRNA will see you when you arrive at the center, answer any questions you might have and be with you until your surgery is completed.
- There will be a separate charge for anesthesia services. Once insurance has been filed, any remaining balance will be billed to you from the CRNA.
