This laboratory uses the standard "Visual Area Estimation" technique of polarized light microscopy (PLM) for determining the quantity of asbestos in a bulk material sample. The analysis of samples containing small amounts of asbestos, less than 10% by weight or fibers shorter than 20 micrometers in length, using this technique may not be accurate. The US Environmental Protection Agency (US EPA) **RECOMMENDS** verification of such analyses by a more reliable method such as the PLM "Point Counting" technique, or in the case of floor tile and short-range chrysotile, the "Analytical Electron Microscopy" techniques. If this service is desired, please contact TEC-AN, Inc. for costs and processing approvals. "Results represent the asbestos analysis of samples submitted by the client. Sample location, description, area, etc., was provided by the client. This report shall not be reproduced, except in full, without the written consent of TEC-AN, Inc. Results relate only to the items tested or calibrated. All results are included in the report.

NOTE: THESE SAMPLES WILL BE PROPERLY DISPOSED OF AFTER 45 DAYS FROM RECEIPT OF RESULTS UNLESS OTHERWISE REQUESTED BY THE CLIENT.

I CERTIFY THAT THE ABOVE SAMPLES WERE ANALYZED IN STRICT
COMPLIANCE WITH APPLICABLE STANDARDS AND REGULATIONS.
