## **DISINFECTANT AND VIRUCIDE SERVICE TREATMENT**

As the COVID-19 continues to spread, **DC Watkins Company** is committed to the health and wellbeing of our community. **DC Watkins Company** will perform a broad spectrum contact treatment to nonporous surfaces using high volume sprayers and ULV machines with a product label, listed on the CDC N-List.

Treatment application can be done after standard business hours and following the completion of normal facility deep cleaning and sanitizing. This sanitation service is solely intended to reduce risk and not meant to guarantee safety against the virus. Application does not leave a chemical footprint. Employees can return to the building within several hours of service completion. Service can be scheduled weekly, bi-weekly, as needed, or anything between!

*These treatments should be part of your ongoing sanitation and disinfectant program to mitigate the spread of bacteria, fungi and viruses and are not intended to replace or be a stand-alone sanitation program to reduce the spread of any virus.*

*These products are labeled as a bactericide, fungicide and virucide. Because there is no residue, surfaces can be re-infected upon contact with an infected person, object or cross-contamination.*

### ***Reasons Why You Should Contact Us For Treatment Today!***

- Your employees are requesting or demanding more preventative controls.
- Your safety/Food Safety Team feels a need to institute this disinfectant service into your current plan.
- An employee is suspected or is positive for COVID-19.
- It is a requirement for a 3rd party auditing or State or Local requirements.
- You feel your staff is not meeting disinfecting standards on their normal cleaning routine.
- There are too many areas that require a more aggressive approach.
- PEACE OF MIND!
