

Mitchell Schwartz, MD

Fellow, American Academy of Dermatology

Certified American Board of Dermatology

Over 30 years experience in cosmetic treatments

Dr. Schwartz runs a private medical and cosmetic dermatology practice in in South Burlington, Vermont, where he has been helping his patients to look and feel their best for over 30 years.

Through his consistent application of the latest technologies, he has earned a reputation as one of the best cosmetic dermatologists in the country. Dr. Schwartz is always evaluating new treatments, and while he was extremely impressed by the results of MicroNeedling, he also recognized opportunities for improvement. He set out to create a better system by bringing together a high quality MicroNeedling device with cutting edge growth factor serums derived from human stem cells. The union of these two breakthrough technologies dramatically improves the appearance of skin and hair to a degree previously attainable only through more aggressive and expensive procedures.

Made in The USA

Testimonials

// I can't believe how my crow's feet just disappeared as if by magic immediately following the first session. The rest of my face is noticeably firmer - particularly around my jawline, which gives the added bonus of a nice smooth neck. I'm extremely excited about this procedure and would highly recommend it to anyone wanting firmer skin with better texture and fewer lines. It REALLY worked well on me! //

- O.L

// Not only did the wrinkles around my eyes vanish, and I mean literally vanish, but the the elasticity of my skin reverted to what it had been at least 10 years ago. I was surprised at how quickly the results became apparent - right away people started telling me my skin looks absolutely amazing. I don't wear makeup anymore because I honestly don't need it. This treatment has made a radical difference in the look and feel of my skin. //

Stem Cell Science

A Breakthrough Approach to Skin Rejuvenation

ProCell Therapies brings together breakthrough MicroNeedling technology with cutting-edge stem cell science to dramatically improve the appearance of skin and hair. Clinical studies prove that this breakthrough treatment achieves better results with shorter healing time than far more expensive procedures such as fractional lasers and chemical peels in improving the appearance of:

- Fine lines and wrinkles
- Scars from acne, stretch marks, injury and surgical procedures
- Sun damage and skin discoloration

ProCell Therapies is the perfect complement to facial fillers, neurotoxin injections, and deeper skin tightening procedures.

How does the ProCell System Work?

The ProCell Pen creates invisible micro-perforations in the skin to stimulate cells known as keratinocytes to increase production of new collagen and elastin. ProCell serums derived from human stem cells penetrate the channels created by MicroNeedling to enhance the production of healthy new skin.

ProCell Pen

The ProCell Pen is a unique MicroNeedling device that dramatically improves skin firmness, elasticity, and tone. While peels and lasers work by injuring the skin to cause a healing response, MicroNeedling stimulates the release of epidermal growth factors without damaging the skin.

ProCell Serums

ProCell Serums are derived from human stem cells and contain a high concentration of natural human growth factors and cytokines. These growth factors support cellular renewal and have potent regenerating properties to improve skin firmness, elasticity, and tone. Fine lines and wrinkles diminish over time, and skin looks and feels brighter, more luminous, and healthy.

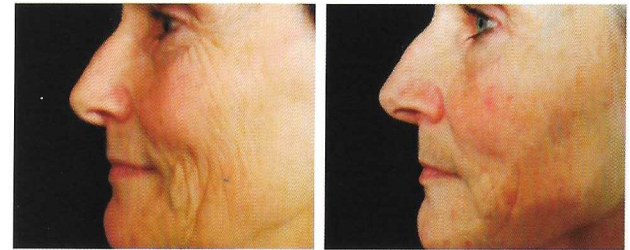

Before & After Results

MicroNeedling with the ProCell pen and serums has resulted in significant improvement in the appearance of wrinkles and acne scarring.
