

Hydroplane ~ \$110

Ultrasound, a cutting-edge technology, utilizes low-frequency sound waves to combat aging skin, reduce wrinkles, clear acne, manage Rosacea and control hyperpigmentation. It supports cellular repair, increases collagen and elastin, hydrates the skin and kills bacteria and viruses; dramatic results are seen and felt after the first treatment. During a facial massage, the hands provide approximately 3 vibrations per second; ultrasound gives three million vibrations per second. This high-frequency massage can soften scars, improve skin tone and increase skin elasticity. The heat produced by ultrasound improves blood flow bringing with it more oxygen and nutrients for healing.
